(54) SUBSTRATE FOR ACTIVE MATRIX TYPE LIQUID CRYSTAL DISPLAY DEVICE, ACTIVE MATRIX TYPE LIQUID CRYSTAL DISPLAY DEVICE USING THE SAME, AND DRIVING CIRCUIT FOR ACTIVE MATRIX TYPE DISPLAY DEVICE AND PROJECTION TYPE DISPLAY DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide the active matrix type liquid crystal display device which makes a display of high quality by suppressing its display unevenness.

SOLUTION: On a signal transmission line which transmits signals to desired sample-and-hold circuits from closely arranged image signal wires V1 to V6 through repeating wires H1 to H6 of conductive films having different relatively high resistance from the said wires, the repeating wires H1 to H6 connected to the image signal wires V1 to V6 are equalized in width and length and as to a signal path which is not reached only by the repeating wires, the end parts of the repeating wires and the coupling part at a signal supply destination are connected by wires S1 to S6 formed of conductive films having relatively small resistance values.

LEGAL STATUS

[Date of request for examination]

14.06.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
